

Eco-Visio is our unique online platform, specifically designed to analyze pedestrian and cyclist count data.

Our Cloud-based platform is accessed through a web browser and allows you to easily share your data with partners, at local, national or international level, over a secure network.

Eco-Visio's many functions have been designed to facilitate your work and to help get the most out for your data with a few simple clicks.

You benefit from all new features and improvements as they are released.

A powerful platform

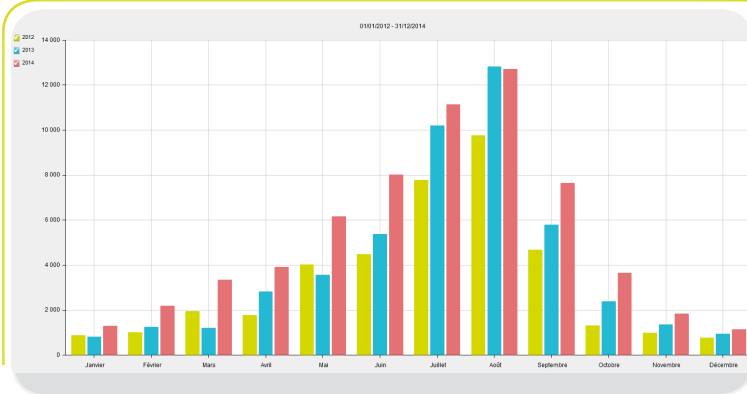

- **Centralize:** all the counting data is properly archived and classified
- **Analyze:** data is immediately available for any kind of report analysis
- **Share:** rights management allows partners to exchange data
- **Manage:** managing your systems is facilitated by quick access to key information about each counter
- **Communicate:** edit regular reports to build up your internal and external communication over the counting data

A secure platform

- Data from your counters is stored on our **secure servers**
- **Backups** are regularly made
- Data transfers are secured by **SSL**

In-depth analysis tools

Eco-Visio's simple, built-in features allow you to analyze and view your data in just a few clicks. You can create daily and weekly user demand profiles and simple comparison of multiple counters.

The exclusion management feature allows you to easily filter out a defined time period (weekends, evenings, holidays) to analyze your data in greater depth. Graphs, charts and tables can be easily exported and incorporated into documents and spreadsheets.

Personalized automatic reports

Eco-Visio's built-in report feature allows you to create a **personalized, standard report in seconds**. The report includes two pages of **key figures and pertinent graphs illustrating typical weekday and weekend trends**.

In just a few clicks, you can produce a detailed report with:

- Key figures (average, total, day of highest attendance)
- IN/OUT direction distribution
- Weekday and weekend analysis

Custom-tailored templates, specifically designed for your needs, are also available on request.

Customized alert system

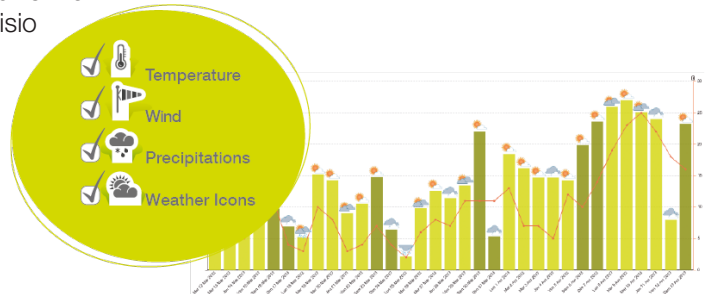

Eco-Visio comes with an **alert and data validation module called Eco-Alert**. Any user with counters that transmit data automatically via GSM/3G can benefit from this useful feature.

Eco-Alert permits users to enter a few, simple parameters that create a range of expected daily counts for each counting system; should a daily count fall outside of the expected range, **a notification by e-mail will alert the user of an unusually low or high count**. Eco-Alert helps users maintain, and stay up-to-date with a fleet of counters with relative ease.

Eco-Visio Weather

Weather has a great impact on people's choice to walk or ride a bike. To make your life easier, we integrated a **weather module** into Eco-Visio that **seamlessly combines weather and attendance data**.

The weather module allows you view your attendance data overlaid with key weather data from a local weather station. The weather and attendance data can be viewed together as a table or graph, allowing you to easily **explain variations in pedestrian or cycling activity due to weather fluctuations**.

National database

Eco-Visio has been designed to support the needs of a **national-scale counting program**.

With Eco-Visio, it is possible to create and manage a national database by collecting, validating and analyzing data collected by any type of counter.

Eco-Visio compiles data from over 3,000 counters distributed about 145 municipalities in the United Kingdom.
